- **EASY TO APPLY CONCRETE COATING**
- **ZIPPER CLOSURE SYSTEM**
- **FAST INSTALLATION**
- **NO MAINTENANCE REQUIRED**

Repairs of underwater elements of bridges have been successfully carried out for many years. However, the increasing age of bridges and related structures worldwide, as well as the greater emphasis on regular underwater inspections according to national bridge standards, indicate a growing need for repairs to elements located beneath or in the water

WHAT IS A PILE JACKET?

The Pilejackets repair systems consist of a high-strength HYDROTEX textile formwork made of Synthetex, available in lengths and diameters designed to protect your steel, concrete, or wooden piles with customized solutions not limited to standard diameters. Pilejackets is a proven cost-effective solution for the repair and protection of piles.
